This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE.

THE "Repertory to Hering's Condensed Materia Medica," so far as completed, is herewith presented to the *Homœopathic Medical Society of Pennsylvania.* To insure absolute correctness each paper has been sent to the author, or compiler, for revision. Attempt has been made to preserve a symmetrical arrangement of all the papers, and at the same time to allow each author as much freedom as possible in the repertorial arrangement of the symptoms.

HOW TO USE THE REPERTORY.

The heart symptoms are subdivided into sections as follows: "Mental Symptoms," "Symptoms of Cardiac Action and Pulse Characters Not Definitely or Specifically Recorded as Being Characterized by Acceleration or Retardation," "Slow Cardiac Action and Pulse," "Increased Cardiac Action and Pulse-rate," "Ebullitions, Orgasm, Etc.," "Palpitation," "Sensations," "Pains," "Clinical Symptoms." The subheadings are manifest at a glance on consulting the section in which you seek to find a symptom. If you wish to know more about the symptom than you find under a sub-caption, turn to the completed symptom (under the name of the remedy) at the head of the section, where the names of all the medicines the symptoms of which have been repertorialized are arranged alphabetically.
